Shipping advice for sending CYPRES units to SSK

Shipping costs vary based on the carrier and method selected. We recommend you use a carrier such as UPS, FedEx, US Postal Service, or DHL, and that you insure the package with an adequate amount of insurance. These carriers do have package tracking services, which we suggest that you monitor.

International Shipping Instructions

You are responsible for all duties and taxes that apply to your country. When preparing to send your CYPRES to us for maintenance / repair, we suggest you include this information on the shipping document:

CYPRES

"Return of aeronautical navigation appliance to the U.S. for repair – no commercial value – to be returned to the original owner after repairs are completed. HTC: 9014.20.8080 – value for customs purposes $20.00 USD."

The value for customs purposes is per device.

As noted in the Shipping Instructions to send unit to SSK, we recommend that you insure the package (value for carriage). Value for customs purposes is different than value for carriage (insurance). If the package is valued for customs purposes for more than $2,500.00 USD, it will require formal customs entry and additional fees will apply for processing by US Customs.

If you have any questions, contact us. We're here to help!
